

SINCE 1992

HANDS, HEART, INTUITION, COURAGE, STRIVING TO IMPROVE WITHOUT COMPROMISE.

LAGO is a family owned company; a 60 years experienced prominent and respected producer of truck and trailer accessories: tool and storage boxes, system mudguards, fire extinguisher boxes together with other complementary products. Established in Italy and able to bring out the expertise of every resource and export it to over 50 countries, along with recognized business ethics and fairness towards its partners.

At LAGO we stay true to our roots and values, without ever forgetting where we began at the longstanding Fontaniva headquarters, where everything still happens.

Our journey never stops, because settling for second best is simply not in our DNA. Moving forward there will always be a solution that is more complete, more practical, more efficient, a system that no-one has yet thought of.

SIDE UNDERRUN PROTECTION

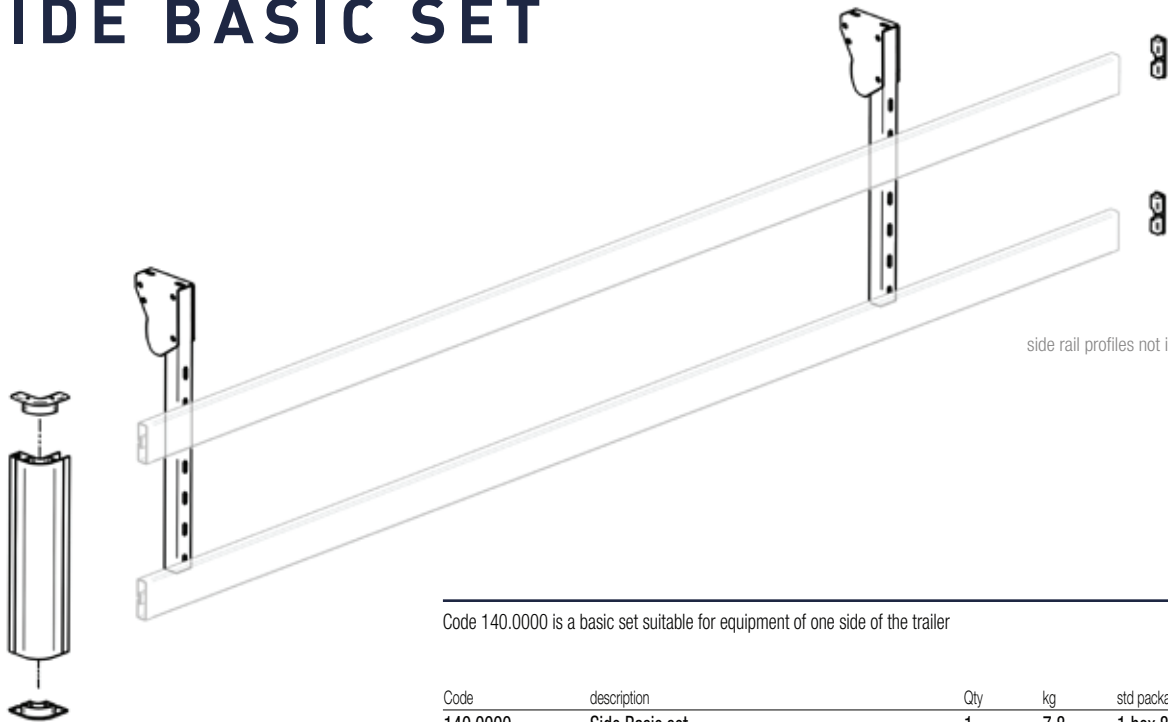

Side underrun protection devices are a great investment to reduce the chance of an accident when a cyclist or pedestrian may fall under the wheels of a truck.

Now a requirement for all construction trucks involved in the Melbourne Metro project, we can expect further demand for side underrun protection devices in the upcoming future. This will allow an improvement in road user safety and potentially reduce fuel consumption.

Lago side underruns have been manufactured to meet most makes and models of trucks and trailers. Compliant with ECE R73.01 standard regulations, Lago side underruns are light weight. Manufactured in Italy with premium quality materials such as aluminium and galvanised steel, Lago side underruns are supplied in complete kit and ready to bolt on.

LATERAL UNDERRUN PROTECTION DEVICES

SIDE BASIC SET

Code 140.0000 is a basic set suitable for equipment of one side of the trailer

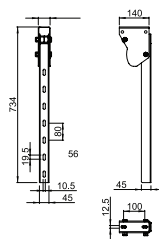

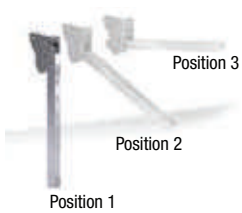

Code	description	Qty	kg	std packaging
